

BA Trading AB

BA Trading are industry experts regarding renovating hydraulic pumps, hydrostatic pumps, hydrostatic motors and hydraulic motors to the majority of construction machines and particularly Volvo. A renovated pump achieves the same performance and quality standards as a brand new pump.

Production takes place in our own hydraulic workshop where we produce around 300 to 400 units each year. We use a modern test rig where the components are test run before delivery.

We also supply hydraulic components to brands other than Volvo. Everything from industry and rail to agriculture and construction. We can renovate pumps from most brands such as Bosch Rexroth, Oilgear, Vickers, Parker and Kawasaki.

Why choose an exchange hydraulic component from BA Trading AB?

- Wide range of knowledge
- Many years of experience
- State of the art test bench
- Pumps adjusted according to specifications
- 12 months or 1000 hours guarantee
- Competitive prices

This is how a renovation works

We have a large warehouse with cores, but if there is one that we do not have at home, the customer sends in their core for renovation.

The work begins with our mechanics dismantling the entire unit. The next stage is to clean all the components that will be reused and identify those which will be replaced.

After cleaning, the work of reassembling the hydraulic pump / engine begins. Much can be reused but wear parts are replaced.

BA Trading AB

The test rig is specially built for accommodating a wide range of different manufacturer's models. In the rig, the working parameters of the machine simulate pressure, flow and power output so that the values meet the specified limits. Even the electronics that control the hydraulic pump or motor are checked to ensure full function. Everything must be one hundred percent before delivery to you, the customer.

When the renovated component is assembled, calibrated and tested, it gets a new surface finish before delivery to the customer.
